Qualifications

Due to the overwhelming demand of applicants for our Profit Coder program, we have implemented different qualifications based on your unique specialization. We have four main types of individuals within the collective – Traders, Educators/Managers, Programmers, and Data Scientists.

Trader

If you would like to assume the role of strictly a trader then we would like to see one week of your trading results. To do so, download [Metatrader 4](#) and your instructor will send you an account username and password. Simply log into the account and start your trading. If you have no prior experience using Metatrader 4, let your instructor know and create a demo with your broker of choice. Send us your log in credentials so we can have a live stream of your trades.

We want you to show us how profitable your unique strategy is, write a few paragraphs about how your strategy works and the type of indicators you use. If you have already created Expert Advisors you are also allowed to use those.

Requirements:

- Trade at least three different currency pairs
- Keep drawdown as low as possible

Manager & Trainer

If you would like to take on a managerial and trainer position for the Profit Coder program, put together a comprehensive lesson based on your unique trading strategy so we can analyze the effectiveness.

You will oversee the training new members that enter the collective so it is imperative that you have a well thought out, effective plan of action on how you anticipate bringing others up to speed.

Some examples of this include:

- Infographics
- An Asana curriculum similar to the one your instructor will send you
- Step by step instructions with pictures and indicators included

Programmer

If you feel that you have exceptional programming abilities, we will pair you with a trader or two who needs a specific piece of software built for them. This is very open ended and will test your team work, communication skills and above all, your creative abilities.

We are looking for individuals that can take a single idea, run with it and even improve upon the idea. We all work in an autonomous environment and would like to see that trait present in our new members.

Some examples of the type of project this will consist of:

- Algorithm Development
- Systems Integration
- Machine Learning/Artificial Intelligence

Data Scientist

If you would like to pursue the Data Science route, your instructor will send you a csv of a trading report. Use any programming language of your choice and perform an analysis.

This is a crucial position as you will be analyzing the performance of algorithms, portfolios of algorithms, and portfolios of portfolios. We are looking for an individual who can create a unique, visual and **automated** way to perform this sort of analysis.

The analysis should include:

- Ratios such as Sharpe, Return/Drawdown, Win/Loss, and any other useful ratios that truly characterize the performance
- A graphical representation of the performance of each algorithm, and portfolio

If you feel that you do not possess any of those skills listed above but still would like to be a part of our collective, the enrollment fee is \$1,900. It can be made in payments and is refundable upon successful completion of the program.

If you would like to learn more, please contact us at 1(888) Source-X or send an email to HR@Profitcoder.com
